data

→ the seed

microRNA targets

Target prediction algorithms: find evolutionarily conserved seed matches in 3' UTRs.

Biological function
of small RNAs

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

microRNA targets

Target prediction algorithms: find evolutionarily conserved seed matches in 3' UTRs.

Such short complementarities are very frequent (60 % of human genes are targeted by miRNAs: Friedman *et al.*, 2009).

Biological function
of small RNAs

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

microRNA targets

Target prediction algorithms: find evolutionarily conserved seed matches in 3' UTRs.

Such short complementarities are very frequent (60 % of human genes are targeted by miRNAs: Friedman *et al.*, 2009).

⇒ miRNAs are implicated in every biological process in animals

Biological function
of small RNAs

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

microRNA targets

Target prediction algorithms: find evolutionarily conserved seed matches in 3' UTRs.

Such short complementarities are very frequent (60 % of human genes are targeted by miRNAs: Friedman *et al.*, 2009).

⇒ miRNAs are implicated in every biological process in animals; “miRNA *X* regulates gene *Y*, which is involved in disease *Z*” (varying the values of *X*, *Y* and *Z*...).

Biological function
of small RNAs

Introduction

data

Weaknesses in the dogma

- Non-conserved sites are functional too

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

Weaknesses in the dogma

- Non-conserved sites are functional too (Grimson *et al*, 2007).

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

Weaknesses in the dogma

- ▶ Non-conserved sites are functional too (Grimson *et al*, 2007).
- ▶ Binding sites outside the 3' UTR are functional too (several known examples *in vivo* + computational analyses).

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

Weaknesses in the dogma

- ▶ Non-conserved sites are functional too (Grimson *et al*, 2007).
- ▶ Binding sites outside the 3' UTR are functional too (several known examples *in vivo* + computational analyses).
- ▶ Three paradoxes.

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

First paradox

Computational programs identify tens or hundreds of targets for each miRNA, yet genetic studies identify a single one.

Biological function
of small RNAs

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

First paradox

Computational programs identify tens or hundreds of targets for each miRNA, yet genetic studies identify a single one.

miRNA	Genetic experiments		Number of computationally predicted targets	
	Target	Reference	TargetScan	PicTar
worm <i>let-7</i>	<i>lin-41</i>	Slack <i>et al.</i> (2000)	65	89
worm <i>lin-4</i>	<i>lin-14</i>	Ambros (1989)	22	32
fly <i>let-7</i>	<i>abrupt</i>	Ambros and Chen (2007)	50	68

Introduction

Biological function
of miRNAsWeaknesses in dogma
Alternative hypothesisBiological function
of piRNAsCnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

Second paradox

MiRNA-mediated repression is much smaller than intrinsic, well-tolerated variations in gene expression.

Biological function
of small RNAs

Cnidarian piRNAs

Cnidarian miRNAs

Cnidarian siRNAs

Conclusion

Supplementary
data

An alternative hypothesis

- First paradox:

Introduction

Biological function
of miRNAs

Weaknesses in dogma

Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs

Cnidarian miRNAs

Cnidarian siRNAs

Conclusion

Supplementary
data

An alternative hypothesis

- First paradox: computational searches find both pseudo-targets and real targets, genetics find only the real targets.

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

An alternative hypothesis

- ▶ First paradox: computational searches find both pseudo-targets and real targets, genetics find only the real targets.
- ▶ Second paradox:

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

An alternative hypothesis

- ▶ First paradox: computational searches find both pseudo-targets and real targets, genetics find only the real targets.
- ▶ Second paradox: pseudo-targets are not sensitive to a 1.1 – 2-fold change, real targets are.

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

An alternative hypothesis

- ▶ First paradox: computational searches find both pseudo-targets and real targets, genetics find only the real targets.
- ▶ Second paradox: pseudo-targets are not sensitive to a 1.1 – 2-fold change, real targets are.
- ▶ Third paradox:

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

An alternative hypothesis

- ▶ First paradox: computational searches find both pseudo-targets and real targets, genetics find only the real targets.
- ▶ Second paradox: pseudo-targets are not sensitive to a 1.1 – 2-fold change, real targets are.
- ▶ Third paradox: set of pseudo-targets can fluctuate during evolution (universally-conserved targets would be enriched in real targets).

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

An alternative hypothesis

- ▶ First paradox: computational searches find both pseudo-targets and real targets, genetics find only the real targets.
- ▶ Second paradox: pseudo-targets are not sensitive to a 1.1 – 2-fold change, real targets are.
- ▶ Third paradox: set of pseudo-targets can fluctuate during evolution (universally-conserved targets would be enriched in real targets).

Prediction: only dose-sensitive genes can be targeted by miRNAs.

Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

Gene	Target for	Indication for dosage sensitivity
worm <i>lin-14</i>	<i>lin-4</i>	Formation of lateral alae at L4 molt is sensitive to <i>lin-14</i> dosage
worm <i>lin-41</i>	<i>let-7</i>	Worm viability is sensitive to <i>lin-41</i> dosage
fly <i>abrupt</i>	<i>let-7</i>	Dendritic branching in multiple dendritic sensory neurons is sensitive to <i>abrupt</i> dosage
worm <i>cog-1</i>	<i>lsy-6</i>	Left/right ASE neuron asymmetry is sensitive to <i>cog-1</i> dosage
fly <i>hid</i>	<i>bantam</i>	Survival of eye bristle cells is sensitive to <i>hid</i> dosage
Mammalian myostatin	<i>miR-1</i> and <i>miR-206</i> in mutant sheep	Muscle mass and racing performance correlate with gene dosage in dogs
mouse <i>Ptbp1</i>	<i>miR-124</i>	Alternative splicing is sensitive to <i>Ptbp1</i> expression level

What is a microRNA target?

An mRNA that is repressed by a miRNA.

Introduction

Biological function
of miRNAs

Weaknesses in dogma
Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

What is a microRNA target?

An mRNA that is repressed **enough** by a miRNA.

Introduction

Biological function
of miRNAs

Weaknesses in dogma

Alternative hypothesis

Biological function
of piRNAs

Cnidarian piRNAs

Cnidarian miRNAs

Cnidarian siRNAs

Conclusion

Supplementary
data

What is a microRNA target?

An mRNA that is repressed **enough** by a miRNA.

A “systems biology” conception of miRNA-target interactions: functional output depends on complex interaction networks.

Introduction

Biological function
of miRNAs

Cnidarian piRNAs
Cnidarian miRNAs
Cnidarian siRNAs

Conclusion

Supplementary
data

Conclusion

- ▶ MiRNAs repress mRNAs, but mRNAs could repress miRNAs too.
- ▶ Target prediction algorithms may have missed an essential feature of miRNA target repression.
- ▶ Sea anemones have as many miRNAs as vertebrates.

Introduction

Biological function
of miRNAs

Weaknesses in dogma
